

FUTURE PROOFING FOR NATURAL CALAMITIES

Droughts, disease, fire and flood have tested the resilience of our coastal and marine environments. Collating stories and listening to people's interplay in the environment is not only fascinating but perhaps the way forward to better future proof our spaces. You can be involved by looking for these outputs on our website.

Fish habitat protection protocol against bushfires

Source reduction plans

Flood debris survey

Bushfire resilience tours

Marine & Coastal Community of Practice

Benthic litter framework

Sea urchin management

The business as usual approach to NRM is challenged by the rate and scale of climate change experienced on the coast. We need to collectively re-examine how things are done.
